

A detailed botanical illustration border surrounds the central text. It includes a pink flower with a yellow center, a yellow hibiscus, a lemon, and various green leaves and stems with small red flowers.

Easy Puppy

Primary Functionality:

1. **Must make puppy accident clean up easier**
2. **Must easily dispose of pee pads**
3. **Eco-friendly, reusable?**
4. **Pee resistant**

Key Features:

***Name - Easy puppy**

***Knowns - What variables are locked**

- **Elastic straps, pee pads, LUNA(my puppy haha)**

***Unknowns - What variables have not been determined**

- **Eco-friendly materials? attachment method,**

1. Name: Pee pad

Knowns: must have a pee pad

Unknowns: eco-friendlier material

2. Name: Easy cleanup - straps

Knowns: elastic?

Unknowns: attachment method to the mat

3. Name: Mat pad

Knowns: it must be larger than the pee pad, reusable/water-resistant material

Unknowns: material? the exact size

---> candle wax/beeswax may be used to make water-resistant?

Constraints:

- **Size: must be larger than the puppy pee pad**
- **Weight: must be strong enough to hold puppy waste**

The thin string attached to the fabric will be an important aspect of the easy puppy

Full frame photo of the fabric piece of the invention

Overview :

- **The easy puppy will be a lifesaver in having an easy clean up for your puppy(s)waste**
- **The fabric will be multiple use(different sizes)**

Pros :

- **Easy way to dispose of waste**
- **Great potty training system**
- **Multiple sizes**
- **Eco friendly**

Cons ;

- **The puppy may have it's accidents and not make onto the basic pad and instead go on the fabric piece**
- **The stings may have the pup confused and would want to play, that being said it may be dragged around by the pup**

Overall, Easy Puppy will be a good place and a convenient (easier) way to help you train new family members. Like this project, it makes this mini invention very useful for new pet owners and future pets. If I can change the end product, when I see the end result, I will only change a few small things here and there. Using my new pup(luna)as a small test subject the end product was very successful, she was confused at first when praising her but did a very good job

Easy Puppy

(and original idea by alexa pelayo)

Design

My first and final design, I kept this idea going instead of trying to see what else I could improve on. Once I make the design I stick to the original idea. By making this would have it be 100x better to clean up your new pups bathroom spot. I recently got a new dog and creating this idea and making it come to life would be a total life saver.

{ key features are the small ropes on the corners of the pad to make it an easy way to dispose the waste }

Build

My building process was a bit weird, at first I did not know where to start despite the planning from the beginning, once I kept staring at the floor with my stuff I was going crazy with thoughts on how I should start. Soon a few min pass by and I figure out how the things should be placed out.

Took the small steps first and picked the right fabric(two old pillow cases)place them down and place the materials down before glueing.

What surprised me was how useful old pillow cases can be and as well as having it be the perfect size

Evaluation

Test
subject
(luna)

Easy puppy is a very helpful tool for a family who is bringing home a new member, this product helps prevent a huge mess while you are potty training your pup.

I liked that this project will make this mini invention very useful for new pet owners and more to come. If i could change my final product I would change only some small things here and there while looking at the final outcome.

Thank You :)
